

LINKRAY

Dynamic Local Load Balancing for EV Chargers

- Use with AC and DC chargers
- Remote Management Solution*
- Subscription-free

LinkRay works with any OCPP 1.6-compatible charger

— POWER
— DATA

Manage Complex Sites - Transform Your Charging Infrastructure

LinkRay sits between your charge points and management system, delivering:

-  **Smart Load Balancing** - Dynamically balance power across up to 100 chargers based on site meter readings to protect your site power restrictions.
-  **Site Based** - Works fully offline or in partnership with a CSMS, maintaining operation even in grid outages - fully offline mode for high cybersecurity resilience in critical infrastructure.
-  **Multi-Vendor Support** - Works with any OCPP-compatible charger, including a mix of DC/AC and single/3-phase, regardless of manufacturer.
-  **Remote Management** - Allows you to remotely configure and monitor LinkRay and all chargers attached to it *remote management for 1 year included.

"LinkRay transformed our multi-vendor charging infrastructure from a management nightmare into a streamlined, efficient system."

- Operations Director, Major Retail Chain

The only load balancing solution that consolidates up to 100 chargers.

(+ up to 6,500 with SiteManager product)

Works with any meter / Works offline or with CSMS

Who Benefits From LINKRAY

Site Owners & Managers

- ⚡ Avoid per-charger subscription fees – no subscription required*
 - ⚡ Maximise site power capacity efficiently with dynamic load balancing
- *LinkRay includes one year of remote manager access. Annual maintenance charge thereafter*

Operations Teams

- ⚡ Manage up to 100 diverse chargers through one interface (expandable to 6400 with Versinetic's SiteManager product)
- ⚡ Reduce site visits with remote access to real-time usage data and perform remote firmware updates
- ⚡ Maintain charging service even during network outages with fast loop local control

Specifiers

- ⚡ Meet site power requirements & charger volumes
- ⚡ Compatible with renewable on-site generation and battery storage
- ⚡ Manage multiple brands; and mix of DC/AC and single/3-phase chargers

Installers

- ⚡ Simple installation and configuration
- ⚡ Remote installation assistance available
- ⚡ Easily expand systems with additional chargers
- ⚡ External relay control to show load balancing status and allow for all stop/cancel
- ⚡ Regular email reports on charging health
- ⚡ Email notifications on device failures

LINKRAY CHARGER MANAGEMENT

- ✓ Offers full offline operation with high cybersecurity resilience
- ✓ Remotely accessible via dedicated web portal for monitoring and maintenance
- ✓ Controls authorisations via RFID/NFC with whitelist of authorised cards
- ✓ Group chargers for simplified management
- ✓ Track user consumption for billing purposes
- ✓ Low data usage compared to cloud CSMS-based solutions
- ✓ Offers support for any RS485 / Ethernet Modbus local energy meters

TECHNICAL SPECIFICATIONS

- **Supply Voltage**
12V DC (8-15V DC)
- **Power Consumption**
<1 Watt
- **Security**
Secure Boot and TPM
- **Communication**
Ethernet, Wi-Fi, LTE CAT-M1/GPRS
- **Interface**
2 x RS485, Modbus RS485 for direct site meter connection
- **Installation**
DIN rail mounted
- **Size**
118 mm x 100mm x 25mm
- **Operating Temperature**
-25°C to +70°C
